Phishing Email Detection & Awareness Report

LAKSHMI PAVAN AKULA

TASK-02

ABOUT THE PROJECT

- **PROJECT TYPE:** Security Awareness & Email Analysis
- **FOCUS:** Phishing Detection
- **DOMAIN:** Cyber Security

OBJECTIVE

The objective of this report is to:
• Analyze phishing email samples
• Identify common phishing indicators
• Classify email risks (Safe / Suspicious / Phishing)
• Explain attacks in simple language
• Provide awareness guidelines to prevent phishing

SCOPE

- Only sample phishing emails were analyzed
- No real attack or exploitation performed
- Analysis is done for educational purposes
- Focus on user awareness and detection

TOOLS USED

- Email Header Analyzer
- Browser URL Inspection
- Manual Analysis Techniques
- Public Phishing Datasets

EMAIL ANALYSIS 1

Subject: Urgent: Verify Your Bank Account

Issue:
Fake banking email trying to steal credentials

Analysis:
• Fake sender domain
• Urgent and fear-based language
• Suspicious link
• Generic greeting

Why it matters:
Users may enter banking details on fake websites

Risk Level: High (Phishing)

Remediation:
• Verify sender email
• Avoid clicking unknown links
• Use official banking apps

EMAIL ANALYSIS 2

Subject: Job Offer Confirmation

Issue:
Fake job email asking for payment

Analysis:
• Unrealistic job offer
• Requests money
• Unknown sender

Why it matters:
Users may lose money

Risk Level: High (Phishing)

Remediation:
• Never pay for jobs
• Verify company website

EMAIL ANALYSIS 3

Subject: OTP Verification Required

Issue:
Fake OTP request email

Analysis:
• Urgent language
• Suspicious link
• Generic greeting

Why it matters:
Attackers can steal account access

Risk Level: High (Phishing)

Remediation:
• Never share OTP
• Verify source

EMAIL ANALYSIS 4

Subject: You Won ₹5,00,000

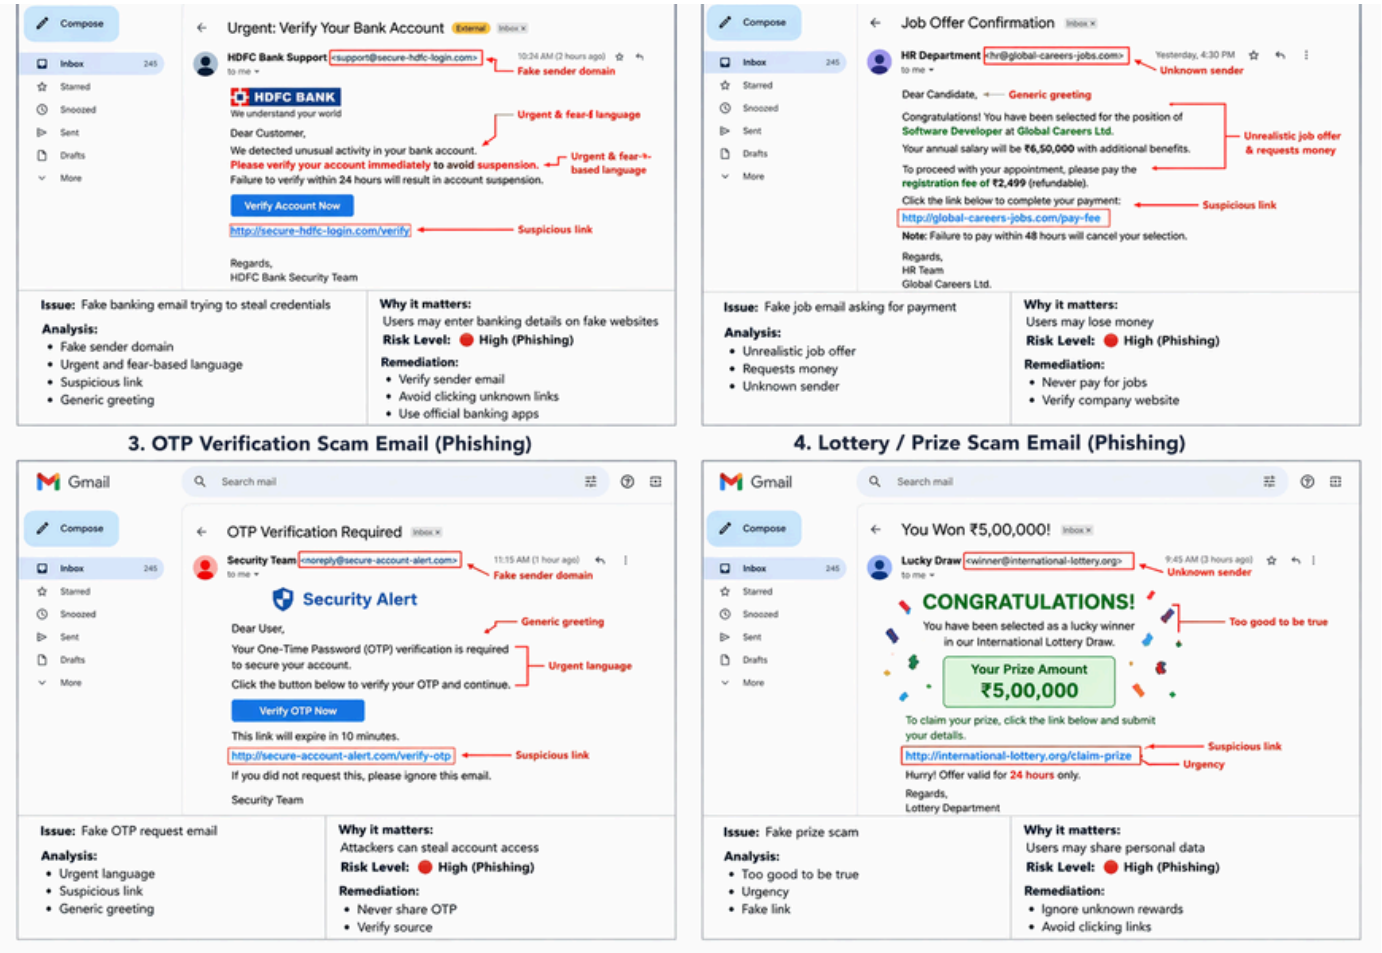
Issue:
Fake prize scam

Analysis:
• Too good to be true
• Urgency
• Fake link

Why it matters:
Users may share personal data

Risk Level: High (Phishing)

Remediation:
• Ignore unknown rewards
• Avoid clicking links



EVIDENCE IMAGES

HOW PHISHING WORKS

- 1. Attacker sends fake email
- 2. Creates urgency or excitement
- 3. User clicks malicious link
- 4. Fake website collects data
- 5. Attacker gains access

COMMON PHISHING INDICATORS

- • Fake sender email
- • Suspicious links
- • Urgency and fear tactics
- • Generic greetings
- • Unrealistic offers

DO’S AND DON’TS

- **DO:**
- • Verify emails
- • Use official websites
- • Report phishing
-
- **DON’T:**
- • Share passwords/OTP
- • Click unknown links
- • Download unknown files

PREVENTION GUIDELINES

- • Always verify sender email
- • Do not click unknown links
- • Check URL before login
- • Enable 2FA
- • Report suspicious emails

CONCLUSION

Phishing attacks are one of the most common cyber threats.
They exploit human behavior rather than technical weaknesses.
By understanding phishing indicators and following security practices, users can effectively protect themselves from attacks.
